

iCalSync Documentation - Home

iCalSync is an Outlook add-on that allows importing and periodic refresh imports of iCal event sources. Events are added to the default calendar in Outlook so that the imported events appear in Outlook's To-Do Bar view. Multiple event sources can be imported from. Feeds from Confluence's Team Calendars plug-in are supported via integration with Confluence's API that automatically requests an iCal feed from Confluence without needing to manually setup the feed.
